                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              interferon gamma receptor beta subunit - mouse
interferon gamma receptor beta subunit - mouse
interferon gamma receptor beta subunit - mouse
interferon gamma receptor beta chain; IFN-gamma R species-specific cofactor; type
C;Species: Mus musculus (house mouse)

"Structure of extracellular tissue factor complexed with factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inhibited with a BPTI mutant.";

J. Mol. Biol. 289:2089-2104(1999).

-I- FUNCTION: INITIATES BLOOD COAGULATION BY FORMING A COMPLEX WITH CIRCULATING FACTOR VII OR VIIA. THE (FF.VIIA) COMPLEX ACTIVATES FACTORS IX OR X BY SPECIFIC LIMITED PROTOLYSIS. TF PLAYS A ROLE NORWAL HEMOSTASIS BY INITIATING THE CELL-SUBRACE ASSEMBLY AND PROPAGATION OF THE COAGULATION PROTEASE CASCADE.
-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- INDUCTION: TF EXPRESSION IS HIGHLY DEPENDENT UPON CELL TYPE. TF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=96190957; PubMed=8609606;

Biol. Chem. 275:31335-31339 (2000)

-I. FUNCTION: RECEPTOR FOR IL-10 AND IL-22. SERVES AS AN ACCESSORY CHAIN ESSENTIAL FOR THE ACTIVE IL-10 RECEPTOR COMPLEX AND TO INTIATE IL-10-INDUCED SIGNAL TRANSDUCTION EVENTS.

-I. SUBCELLULAR LOCATION: Type I membrane protein.

-I. SIMILARITY: Contains 2 fibronectin type III domains.

-I. SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pestka S.; "Identification and functional characterization of a second chain of

FUNCTION: INITIATES BLOOD COAGULATION BY FORMING A COMPLEX WITH CIRCULATING FACTOR VIO W VIA. THE [TF:VIIA] COMPLEX ACTIVATES FACTORS IX OR X BY SPECIFIC LIMITED PROTOLYSIS. TF PLAYS A ROLE NORMAL HEMOSTASIS BY INITIATING THE CELL-SURFACE ASSEMBLY AND SPROPAGATION OF THE COAGULATION PROTESASE CASCADE. SUBCELLULAR LOCATION: THE CHARTON PANILY. SIMILARITY: BELONGS TO THE TISSUE FACTOR PAMILY.

"Cloning of guinea pig tissue factor cDNA: comparison of primary
"Cloning of guinea pig tissue factor cDNA: comparison of primary
structure among six mammalian species.";

Thromb. Haemost. 83:455-461(2000).

-!- FUNCTION: INITIATES BLOOD COAGULATION BY FORMING A COMPLEX WITH
CIRCULATING PACTOR VII OR VIIA. THE [TP:VIIA] COMPLEX ACTIVATES
FATORS IX OR X BY SPECIFIC LIMITED PROTONYSIS. TF PLAYS A ROLE IN
NORMAL HEMOSTASIS BY INITIATING THE CELL-SUFFACE ASSEMBLY AND
PROPAGATION OF THE COAGULATION PROTEASE CASCADE.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- SIMILARITY: BELONGS TO THE TISSUE FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21 LIGWVLVQVAGAEGI--PVKPYNLTWKSTNFKTILEWEPKPI----NNVYTVQ----IST

Cell. Biol. 14:8133-8142(1994).

-- FUNCTION: RECEPTOR FOR INTERFERONS ALPHA AND BETA. BINDING TO TYPE I IFOR TRIGGERS TYROSINE PHOSPHORYLATION OF A NUMBER OF PROTEINS INCLUDING JAKS, TYK2, STAT PROTEINS AND IFN-R ALPHA-AND BETA-SUBUNITS THEMSELVES.
                                                               01-AUG-1990 (Rel. 15, Created)
01-AUG-1990 (Rel. 15, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Interferon-alpha/beta receptor alpha chain precursor (IFN-alpha-REC).
IFNAR1 OR IFNAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- TISSUB SPECIFICITY: IFN RECEPTORS ARE PRESENT IN ALL TISSUES AND BUYEN ON THE SURFACE OF MOST IFN-RESISTANT CELLS.
-!- FURN ON THE SURFACE OF MOST IFN-RESIDES BY TYKE TYROSINE KINASE.
-!- SIMILARITY: CONCAINE 2 fibronectin type III domains.
-!- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE-92129376; PubMed-1370833;

"Behavior of a cloned murine interferon alpha/beta receptor expressed
in homospecific or heterospecific background.";
Proc. Natl. Acad. Sci. U.S.A. 99:4774-4778 (1992)
--- FUNCTION: RECEPTOR FOR INTERFERONS ALPHA AND BETA. BINDING TO TYPE
I IFNS TRIGGERS TYROSINE PHOSPHORYLATION OF A NUMBER OF PROTEINS
INCLIDING JAKS, TYTY, STAT PROTEINS AND IFN-R ALPHA-AND BETA-
                                                                                                                                                                        01-FEB-1994 (Rel. 28, Created)
01-FEB-1994 (Rel. 28, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Interferon-alpha/beta receptor alpha chain precursor (IFN-alpha-REC)
IFNARI OR IFNAR OR IFAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Contains 2 fibronectin type III domains.
SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                             Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"A growth factor-responsive gene of murine BALB/c 3T3 cells encodes a protein homologous to human tissue factor.";

Mol. Cell. Biol. 9:2567-2573 (1989).

-! FUNCTION: INITIATES BLOOD COAGULATION BY FORMING A COMPLEX WITH CIRCULATING FACTOR VII OR VIIA. THE ITF VIIA] COMPLEX ACTIVATES FACTORS IX OR X BY SPECIFIC LIMITED PROTOLYSIS. TF PLAYS A ROLE IN NORMAL HEMOSTASIS BY INITIATING THE CELL-SURFACE ASSEMBLY AND PROPAGATION OF THE COAGULATION PROTEASE CASCADE.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: BELONGS TO THE TISSUE FACTOR FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=98035727; PubMed=9367779; Sogbe B., Williams G., Birch A., Sogbe S., Stuart F., Henke C., Bridges A., Williams G., Birch A., Winkler F.K., Robinson J.A.; "Neutralizing epitopes on the extracellular interferon gamma receptor (IFRgammaR) alpha-ofhain characterized by homolog scanning mutagenesis and X-ray crystal structure of the A6 fab-IFNgammaR1-108 complex."; J. Mol. Biol. 273:882-897(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: Monomer.

SUBCELLULAR LOCATION: Type I membrane protein.

PIN: BEOSPHORYLATED AT SER/THR RESIDUES.

SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.

SIMILARITY: Contains 2 fibronectin type III domains.

SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

The invention relates to an isolated type 2 cytokine receptor family (CRF2-12) nucleic acid molecule encoding a polypeptide with amino acids 1-66 of a 231 residue amino acid sequence, given in the specification, or its complement. The compositions and methods of the present invention are useful for diagnosing, screening and treating disorders associated with abnormal CRF2-12 acitivity such as autoimmune diseases like rheumatoid archritis, multiple sclerosis and inflammation. This sequence represents a cytokine receptor family 2 (CRF2-12) protein relating to the
                                                                                                 Immunosuppressive, antirheumatic, antiarthritic, neuroprotective; antiinflammatory, interleukin-antagonist-22, agene therapy, interferon-antagonist-alpha; interferon-antagonist-beta; interferon-antagonist-obeta; interferon-antagonist-gamma, cytokine receptor family 2; CRF2-12; autoimmune disease; rheumatoid arthritis; multiple sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, cytokine receptor; immune disease; psorlasis; cancer; infection; rheumatoid arthritis; multiple sclerosis; Crohn's disease; ulcerative colitis; transplant rejection; abortion; antipsoriatic; immunosuppressive; antirheumatic; antiarthritic; neuroprotective; antiinflammatory; antiulcer; cytostatic; dermatological;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of 9 novel human PRO polypeptides and the CDNA sequences (AAS15360-AAS15368) encoding them. The novel PRO polypeptides include PRO1356, PRO1368, PRO1368, PRO3444, PRO3151, PRO9544, PRO1008 and PRO19558. The CDNA sequences encoding these PRO polypeptides have been designated as clones DNA92213-2567, DNA96403-1553, DNA84118-2520, DNA87997, DNA89273, DNA922213-2567, DNA96403-1553, DNA101921 and DNA1A18997 respectively. Compositions (e.g. vaccines) containing PRO polypeptides and methods of immune-related disorders (e.g. otherwise) containing PRO polypeptides and methods of inflammatory disorders (e.g. otherwise), include immune-mediated inflammatory disorders (e.g. otherwise), include immune-mediated inflammatory disorders (e.g. otherwise), include immune-mediated contoining the provine system (e.g. diabetes mellitus), infectious disorders (e.g. otherwise), immune-related renal diseases (e.g. cirrhosis), demyelinating diseases of the peripheral or central nervous system (e.g. Guillain-Barre syndrome), immune-mediated skin diseases (e.g. contact dermatitis), neoplasias and transplantation associated diseases. The polynucleotide sequences of the invention may be contact dermatities of the present the novel human contact dermatities are syndromed to the province of the contact dermatities of the province of the novel human contact dermatician may be contact dermatities of the province of the invention may be contact dermatities of the province of the novel human contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be contact dermatician may be conta

The invention relates to secreted and membrane-associated polypeptides and polymucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or leavels of these polymucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing their esponse. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoietic disorders, wound healing disorders, cholesteryl ester storage disease, inflammation, congenital museular dystrophy, junctional epidermolysis cullosa, Parkinson's disease, Huntington's chorea, multiple sclerosis, viral and bacterial infections, Alzheimer's disease, asthma, arthritis, allergies, schizophrenia, sbd442445PROa-associated disorders arthritis, cyclesis, poriasis, inflammatory bowel disease, asthma, arthritis, springer, restenosis, brain injury, AIDS, bome diseases, transplant rejection, graft verse host disease, ischaemia, stroke, acute respiratory disease including parasupranuclear palsy, myotonic dystrophy, ceppicatory diseases including chronic obstructive pulmonary disease.

Crespiratory diseases including diseases mellitus, renal disease.

Crespiratory diseases including diseases mellitus, renal disease including chronic renal fallure, and mon-viral hepatitis, type II disbetes mellitus, renal disease including obstruction and cropical sprue, spleen disorders including hypersplenism, obstruction and tropical sprue, spleen disorders including propersions and elemental muscle diseases including low testosterone and malignant lymphoma, testicular cancer, male infertible.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of 3 variants of a human cytokine receptor. The sequences can be used in the diagnosis, prevention and treatment of immune diseases, including psoriasis, cancer, chronic/life-threatening infections, rheumatoid arthritis, multiple sclerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a new polynucleotide that encodes a soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred to as IL-228P), where the complementary sequence of the invention hypridises under stringent conditions to a nucleotide sequence of 2271 or 2366 base pairs, as given in the specification. The molecules of the invention are useful for inhibiting (antagonising) effect of IL-TIF/IL-22 invention are useful for inhibiting under IL-TIF/IL-22 is present in a sample, for inhibiting binding of IL-TIF/IL-22 to a binding partner, preferably in vitro, and for obtaining an antibody molecule specific for the soluble binding protein of the invention, from a population or panel of antibody molecules of diverse binding specificity. The soluble protein is further useful in manufacture of a medicament for treating an IL-22 mediated fasease and for assaying an agent, preferably antibody or a peptide fragment of IL-TIF/IL-22 or the soluble protein that modulates binding of the soluble protein to IL-TIF/IL-22, where the agent identified is used in the manufacture of medicament for treating IL-TIF/IL-22 mediated disorder. The antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein, where the antibody is determining presence of the soluble protein was included the manufacture of the wall included the manufacture of the manufacture of the soluble protein, where the antibody is determining presence of the soluble protein was included the manufacture of the soluble protein was included the manufacture of the soluble protein, where the antibody is detected by the soluble protein and the manufacture of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polynucleotide and polypeptide of soluble protein which binds to interleukin-TIF/IL-22 useful for inhibiting effect of IL-TIF/IL-22 on a

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliozate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated immunosorbant assays (ELISA). Disorders which are diagnosed or treated immunosorbant disorders e.g. rheumatoid arthritis, or property disorders e.g. rheumatoid arthritis, or property disorders e.g. cardiac arrest, cerebrovascular disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungion and coular disorders e.g. corneal infection, and many other disorders e.g. corneal infection, and many other disorders e.g. corneal infection, and many other disorders e.g. cransplantation, for supporting cell culture of primary tissues, to prevent skin aging due to sunburn, to maintain organs before cransplantation, for supporting cell culture of primary tissues, to respensate tissues and in chemotaxis. The polypeptides can also be used as food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage and inchemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage appailities; fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional carbohydrate, vitamins, minerals, cofactors and other nutritional carbohydrate, with the present the present of preserv
                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune spetem disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end estage renal disease), hyporpoliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial infarction) and cancerous diseases. Sequences ABUS4914+ABUS5699 and ABUS5748 represent human novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; immunosuppressive; antiarthritic; antirheumatic; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; cerebroprotective; notropic; notrocic; fundicide; opthalmalogical; vulnerary; secreted protein; rheumatoid arthritis; hyperproliferative disorder; cardiovascular disorder; cardiovascular disorders cerebrovascular disorder; cerebral ischaemia; anglogenesis; nervous system disorder; Alzheimer; glesase; infection; ocular disorder; corneal infection; wound healing; epithelial cell proliferation; skin ageing; food additive; preservative; antiproliferative.

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -

Claim 11; SEQ ID No 891; 980pp; English.

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked

```
immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. neoplasms of the breast or liver, ardiovascular disorders e.g. orthogonesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintenian organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage and inchemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage and other nutritional components. The present since sequence represents an ovel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        muscular disorder; respiratory disease; reproductive disorder; gastrointestinal disorder; pulmonary disorder; cardiovascular disorder; phyperproliferative disorder; inflammatory disease; allergic reaction; blood related disorder; cancer; immunosuppressive; antiinflammatory; cardiovascular; nephrotropic; cytostatic; antiallergic; thrombolytic;

```
The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lugus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polype and sinusitis), reproductive disorders (e.g. congenital heart defects, Ebstein's cardiovascular disorders (e.g. congenital heart defects, Ebstein's cardiovascular disorders (e.g. congenital heart syndrome), renal disorders (e.g. anomaly and hypoplastic left heart syndrome), renal disorders (e.g. kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. esptic shock, bursitis and appendicitis), allargic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, cheroscierosis and myocardial infarction) and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary cardiovascular or renal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           <u>ب</u>

Nucleic acid associated proteins and nucleic acids for diagnosing, treating and preventing cell proliferative (e.g. cancers), neurological (e.g. epilepsy or stroke) or autoimmune disorders (e.g. AIDS) -

The invention relates to nucleic acid-associated proteins (NAAP) and nucleic acids. The nucleic acid and amino acid sequences are useful for diagnosing, treating and preventing cell proliferative e.g. arteriosclerosia, therosclerosis, lymphoma or cancers), neurological (e.g. epileppy, Alzheimer's disease or stroke), developmental, and autoimmune disorders (e.g. AIDS, allergies, or anaemia) or infections (e.g. malaria, or leishmania), as well as in assessing the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of nucleic acid-associated proteins. The invention is useful in gene therapy. The present sequence is human NAAP-7.

The present sequence is encoded by tumour suppressor gene IB3089A, also known as DBCCRI (Deleted in Bladder Cancer Chromosome Region candidate 1). The gene is located at 9432-33. Although the gene is controlled in several bladder cancer cells. The DBCCRI gene is involved in the development of sporadic cancer, probably by the deletion of one the development of sporadic cancer, probably by the deletion of one alled of the gene and/or hypermethylation of the remaining allele, leading to reduced expression of the gene. DBCCRI nucleic acid sequences are used for treatment or prevention of cancer, particularly bladder, ovarian or skin cancer, squamous carcinoma, renal cell carcinoma or squamous cell oesophageal carcinoma. The DBCCRI protein can be used directly in the same way, or used to raise antibodies and to screen for modulators. The products can be used for diagnosis or prognosis of cancer, or indicate predisposition to cancer (including prenatal testing), particularly where this is associated with loss of heterozygosity at 9432-33. Antibodies may also be used for affinity purification, therapeutically as modulator and to detect the protein in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in polypeptides. The proteins and diagnosis of medical conditions caused in the treatment, prevention and diagnosis of medical conditions caused by p. acnes. The disorders include SAHDE syndrome (syndrotis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bono, joints and the central nervous system, however it is particularly involved in the inflammatory lessone associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention of ample with a binding agent that binds to the proteins of the invention pelypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to charging the expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by antiper allowed the antipologies and chargined inked immunosotbent assay (Elisa).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printer specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The DBCCR1 protein has cytostatic activity. The present sequence and the DBCCR1 promoter can be used in the diagnostic, prophylactic and therapeutic treatment of cancer, especially that which is associated with loss of heterozygosity involving 9q32-33. The cancer includes bladder cancer, squamous carcinoma, skin cancer, renal cell carcinoma, oesophageal and ovarian cancers.
                                                                                                                                                                                                                       Human; tumour suppressor; IB3089A; cytostatic; promoter; Deleted in Bladder Cancer Chromosome Region candidate 1; DBCCR1; diagnostic; prophylactic; therapeutic treatment; cancer; skin; loss of heterozygosity; LOH; bladder; squamous carcinoma; renal cell; oesophageal; ovarian; chromosome 9q32-33.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a tumour suppressor protein 183089A, also referred as DBCR1 for Deleted in Bladder Cancer Chromosome Region candidate 1. The protein is obtained from a CDNA whose major portion is derived from a clone (TexpsporyAt2270) isolated from a gridded human foetal brain cDNA library. The DBCCR1 gene was found to be localised at 9932-33 chromosomal region between D951848 and AFWA239XA9. It is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 55; DB 21; Length 761; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a single exon mucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlippoproteinaemia, hyperlipidaemia and hypercholesterolaemia which human liver single exon encoded peptides of the invention.

Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; foetal liver; gene expression; single exon nucleic acid probe.
Human; liver; cirrhosis; hyperlipoproteinaemia; hyperlipidaemia;
hypercholesterolaemia; coronary heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human genome-derived single exon nucleic acid probes useful for analysing gene expression in human adult liver -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5;

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

-1-FUNCTION: Intracranial injection into mice of 10 pmol/g of the peptide induces running in circles and hyperactivity. At higher doses (50 pmol/g), the mice exhibit running and climbing symptoms for close to one hour. Between 130 and 150 pmol/g, characteristic "spasmodic" symptomatology is elicited. A hand climbing symptomic jump high and start running rapidly. When exposed to a loud hand clap, or if the cage cover were dropped, the mice lose motor

Sequence 27618, Application US/09252991A

Sequence 27618, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR PELING DATE: 1998-02-18

## This Page is Inserted by IFW Indexing and Scanning Operations and is not part of the Official Record

## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

BLACK BORDERS

IMAGE CUT OFF AT TOP, BOTTOM OR SIDES

FADED TEXT OR DRAWING

BLURRED OR ILLEGIBLE TEXT OR DRAWING

SKEWED/SLANTED IMAGES

COLOR OR BLACK AND WHITE PHOTOGRAPHS

GRAY SCALE DOCUMENTS

LINES OR MARKS ON ORIGINAL DOCUMENT

REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

## IMAGES ARE BEST AVAILABLE COPY.

☐ OTHER:

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
